

Technical University viewpoints from Finland

- The share of women in technical studies grows slowly – currently about 20% of technology students are women in Finland.
 - Critical time is during secondary school, when students choose whether to study mathematics and physics / chemistry in high school or not. Without these, entrance to technical universities is very difficult.
- ⇒ We need to ensure that the image of technical sciences, and clean energy as a cross-cutting issue in technology, is interesting and up-to-date among 15-year olds
- ⇒ We need more information campaigns from universities and from companies to reach everyone
